

OH-LSQ

Lead Scheduling & Queue Engine

"Every patient call tracked. Every retry enforced. Every missed lead visible."

THE PROBLEM WE'RE SOLVING

TODAY'S REALITY

- ~75% of patients get fewer than 3 call attempts
- Callbacks tracked in WhatsApp threads and sticky notes
- Managers learn about missed leads after revenue is already lost
- Agents spend 15–20% of time on recall logistics, not calling

ROOT CAUSE

- No system enforces a second call attempt
- No system schedules the callback a patient requested
- No manager visibility into queue health or SLA compliance
- Workflow depends on agent memory — not system enforcement

"This is a process design failure — not a people failure."

HOW OH-LSQ WORKS

OMS

Doctor places order
READY_FOR_CALLING

OH-LSQ Engine

Lead created
First task in 10 min
Assigned to agent

Agent Queue

Prioritized tasks
Call detail + history
Outcome logged

Auto Follow-up

Next task scheduled
Retry / Callback
Repeat until done

AUTOMATICALLY HANDLED

No Answer

Retry in 4 hours. Auto-scheduled.

Patient said Call Later

Callback at requested time. Auto-scheduled.

OMS cancels mid-call

Agent notified instantly via real-time alert.

WHAT'S BUILT

Prioritised Task Queue

Agents always know their next action. Overdue callbacks surface first. No manual sorting or decision-making needed.

Sticky Agent Assignment

Same agent owns all follow-ups for a lead. Floats to any available agent if original is offline.

Real-Time Alerts (SSE)

If OMS updates or cancels a lead mid-call, the agent sees an instant banner — no page refresh required.

Race Condition Protection

PostgreSQL row-locking prevents double-assignment across 7–20 simultaneous agents. Zero duplicates.

Business Hours Scheduling

Tasks after 11 PM auto-hold until 8 AM. Configurable shift windows. No patients disturbed overnight.

Full Audit Trail

Every call, state change, and assignment logged with timestamp and actor. Visible inline on any lead.

Waiting Queue

WHAT MANAGERS CAN DO

- ✓ See every agent's calls, connections, and conversions in real time
- ✓ View pending queue — tasks waiting because no agents were online
- ✓ Manually assign or bulk-reassign tasks to any agent
- ✓ Filter leads by any state, agent, city, doctor, or date range
- ✓ Export any filtered result set as CSV
- ✓ Reopen UNREACHABLE leads for another round of attempts
- ✓ Configure priority bucket order via drag-and-drop
- ✓ Configure operating hours and SLA windows in admin panel

ROADMAP

Phase 1

MVP — Now

- ✓ OMS webhook integration (create / update / cancel)
- ✓ Lead & task engine with full retry logic
- ✓ Agent queue with real-time SSE notifications
- ✓ Round-robin assignment with concurrency safety
- ✓ Manager dashboard — live stats & performance
- Business hours scheduling + SLA alerts
- Bulk assign + CSV export + Audit trail UI

Phase 2

Operational Depth — Next Quarter

- Ozontel integration (click-to-call, phone masking)
- OMS write-back (slot confirmation sync)
- Slack alerts on state transitions
- Waiting queue with rate-limited onboarding
- Sticky assignment enforcement

Phase 3

Intelligence — H2 2026

- AI-based lead prioritization
- Predictive callback timing
- Multi-channel reminders (WhatsApp / SMS)
- Advanced analytics & conversion attribution

One internal platform. No more missed patients.
